Preparation and application

1. Prepare the surface

The underlying finish must be suitable, dry and clean. Assess absorption and compatibility before treating the full area.

2. Dilute the material

Prepare the glaze with 30% water. Mix the product evenly before use.

3. Produce a test

Sample the colour on the same type of substrate. Check the effect under the planned lighting in the room. An 8-hour wait is recommended between coats; check actual dryness before recoating.

4. Apply the glaze

Spread the finish with tools and a technique suitable for the required result. Maintain a consistent movement and quantity of material to reproduce the sample.

Application notes

Reference dilution: 30% water.

Storage

Store in the tightly closed original container in a suitable place, protected from frost, direct sunlight and sources of heat. Reseal carefully after dispensing and follow the instructions on the label.

Safety

Read the product label and Safety Data Sheet before use. Wear the specified personal protective equipment and work with adequate ventilation. Do not release residues into the environment.
